

INSTALLING THE SAUNATROIKKA ONTO YOUR SAUNA STOVE

Rinse the frame of the Saunatroikka and the small sauna stove stones, using plenty of water. Fill the Saunatroikka with the stones. Each sauna is different, so please install the Saunatroikka onto the stove in a way which suits your own sauna and preferences. Initially, we recommend that you install the Saunatroikka towards the back of the sauna stove, leaving clear space between the Saunatroikka and the heating coils and smoke duct. In order that the Saunatroikka functions properly, it is important that you install it in a horizontal position on the stove, i.e. with the fountain pipe pointing straight upwards. When installing the Saunatroikka, please make sure that the fountain pipe is not directed towards the sauna boards! **PLEASE EXERCISE SPECIAL CARE WHEN FILLING THE SAUNATROIKKA FOR THE FIRST TIME FOLLOWING ITS INSTALLATION! DO NOT ALLOW CHILDREN TO OPERATE THE SAUNATROIKKA UNSUPERVISED!**

USING THE SAUNATROIKKA

Pour warm water into the Saunatroikka's rock chamber. Avoid pouring water into the fountain pipe, as this causes heavy splattering when the Saunatroikka starts working. Initially, the Saunatroikka will give off soft steam from its small stones, but as the water runs out and you re-fill the rock bowl, the Saunatroikka will turn into a beautiful fountain with three water pillars. Always exercise care when filling the Saunatroikka for the first time. The fountain is livelier at the beginning, but evens out during re-fills to become a rippling fountain. Various sauna fragrances are eminently suitable for the water used to fill the Saunatroikka, enhancing the overall luxuriant effect of the water pillars.

TROUBLESHOOTING

When correctly installed, the Saunatroikka forms three water pillars and creates the perfect sauna atmosphere over its long lifecycle. To ensure that your Saunatroikka works properly, please check that it is in a horizontal position prior to heating the sauna. If your fountain does not function effectively, try to install it in a hotter spot in your sauna stove. If your fountain flows too quickly, place it further away from the heating coils or smoke duct. To slow down the initial flow of the fountain, fill the rock bowl with cold water when you begin heating the sauna. **NEVER TRY TO ADJUST THE INSTALLATION OF THE SAUNATROIKKA WHILE THE SAUNA STOVE IS HOT.**

If a fountain pipe comes loose, or does not work, refit it into its socket and tap the end of the pipe lightly a few times, making sure that it is securely fastened. A small stone blocking the feed opening can limit the functionality of a pipe. Remove the stones and rearrange them in the rock bowl.

TO FIND THE STRENGTH OF FOUNTAIN BEST SUITED TO YOUR SAUNA, TRY THE SAUNATROIKKA IN DIFFERENT POSITIONS ON YOUR SAUNA STOVE.
